

PRINTING: CLOSING THE
SECURITY GAP.

DOES YOUR SECURITY EXTEND BEYOND THE FIREWALL?

FIREWALL ✓ ANTIVIRUS ✓ PRINTING ?

The loss of sensitive documents can be disastrous for a business. Which is why you need to protect your data with efficient antivirus software and firewalls. But there is one potential security breach in particular that is often neglected: your printers and MFPs. These are places where confidential materials can all too easily fall into the wrong hands, either through wilful theft or by accident. The number of sensitive documents that are left unguarded in printer trays, forgotten or lying around waiting to be collected is striking.

The results of data theft are the same no matter what business you run. Your brand's reputation will suffer. You lose the trust of your customers and you may face significant financial losses.

THE THREE WEAK LINKS

DATA TRANSFER

Once your data is sent to be printed, it is no longer protected by your firewalls and it is vulnerable to interception and hacking.

STORAGE

After your data has been printed, it remains stored on your MFP's hard drive, where it might be accessed by unauthorised persons.

HARD COPY

Printouts left in output trays are a security breach that is all too common. Unattended confidential printouts can quickly be scanned or copied.

SECURING ALL YOUR PRINTING PROCESSES.

KYOCERA OFFERS SCALABLE SOLUTIONS FOR ALL YOUR BUSINESS REQUIREMENTS.

DATA SECURITY

We can efficiently protect your data against interception from outside or from any attempts to hack into your system by:

- > Transmitting print jobs with secure protocols.
- > Encrypting print jobs on the device's hard disk or print server.
- > Automatically deleting sensitive data from an MFP hard drive after printing.

ACCESS CONTROL

By controlling the access to your devices, you can prevent their unauthorised usage.

- > Use standard company ID cards or PIN codes at the device allowing only authorised access.
- > Ensure that only authorised users can use your devices.
- > Define who is allowed to print, copy or scan in order to prevent misuse.

PRINT&FOLLOW™

Print&Follow™ is a simple way to ensure that users can collect their sensitive documents at the time and device they wish to do so.

- > Ensures every printout is collected by the right recipient.
- > Avoids documents becoming caught up in print backlogs.
- > Guarantees the privacy of your document output.

SECURITY SOLUTIONS FOR EVERY BUSINESS.

KYOCERA's customers depend upon watertight security and we provide security solutions for sensitive businesses, such as banks, hospitals and large industries. We also provide security for companies both large and small that depend upon keeping their confidential and secret material just that ... secret.

“

Our main concern was that anybody could walk by and grab documents out of the devices. With KYOCERA Solutions, the employees now have their own badges and get the print results they want – it's a perfect solution.

”

Lothar Kittel
Director Global IT Business Service
Knorr-Bremse

“

KYOCERA improved our security and confidentiality regarding sensitive documents, which was a critical issue for our organisation.

”

Jaison George
CIO
KPMG United Arab Emirates

“

Apart from significantly increasing the satisfaction of all users and the security of our data, we cut our printing costs by 120,000 Euros annually.
